MIE ASSESSMENTS

The IKM TechChek Problem Solving A and Problem-Solving B

These assessments are critical tools for evaluating the cognitive agility and analytical reasoning essential in today's software development environments.

Tailored to measure fundamental problem-solving abilities such as logical deduction, numerical fluency, pattern recognition, and attention to detail, these assessments help identify candidates with the mental acuity necessary to navigate complex coding challenges and fast-paced development cycles.

While each version presents a unique set of scenarios, both are structured to deliver complementary insights, offering a balanced view of a candidate's aptitude.

Below is a breakdown of the core skill areas assessed:

Equations and Spatial Relations	Test knowledge of graph lines and points; reading and comprehending data charts; finding the area and perimeter of geometric figures; and solving for variables.
Emphasizing Details	Measures focus and awareness through questions that require quick responses. This includes image and text comparison.
Sequencing and Patterns	Assesses ability to recognize patterns and properly identify sequences. This includes measuring logical reasoning with number series.
Using Arithmetic	Tests ability to use inductive and deductive reasoning in resolving numerical problems. This includes solving everyday mathematical problems, rounding exercises, and simplifying expressions.

Results: IKM TechChek Problem Solving A Overall Score 70%
IKM TechChek Problem Solving B Overall Score 54%
